S2K SMART CENTER

VAI

S2K Smart Center

At VAI, we see the internet as the future of Enterprise Computing. By delivering software through a browser with a flexible web interface, we can now provide the user with a single sign on of all web applications which will simplify the user experience, increase productivity, and minimize training costs. In addition, web-based software provides mobile access enabling every user in the organization immediate anytime, anywhere computing. As a leader in Enterprise Software for the mid-market, VAI's focus has always been to develop robust solutions that solve real-world business issues and drive bottom-line results. With the introduction of S2K Smart Center, our customers can now compete at a very high level, and by leveraging the flexibility and mobility that the web provides, they have unlimited growth potential.

S2K Smart Center

Responsive Design
Conform to Every Device

Smart Center was built on standards-based technologies such as HTML5 and AJAX. Without any special translations, conversions or re-programming, a web app can run on any platform with a modern, standards-compliant web browser. What's even better is that the portal screens have a Responsive Design that will automatically resize to the specific device, whether that be a desktop, a laptop, a tablet, or any mobile device.

Cloud-Based
Anytime, Anywhere Access

One of the benefits of this browser interface is that it allows VAI to deploy a true Cloud-based solution. Organizations are increasingly adopting cloud offerings for critical business operations. As more consumers and businesses adopt tools such as smart phones and tablets, the ability to host data in the cloud and access it from just about anywhere on the planet is quickly becoming vital. S2K Smart Center gives customers multiple options for their infrastructure including on-premise servers, or cloud deployment.

Collaborative
Increase Your Productivity

Business process automation was a key component behind S2K Smart Center. It all starts with a company wide notification system that allows every user to monitor daily tasks and business alerts. From any application, a user can create a task and assign that task to any employee. From the S2K Smart Center home screen the user will see all the daily tasks that have been assigned to them. In addition, workflow alerts can be viewed from the home screen to notify the user of business issues that require immediate attention.

Configurable
Complete Role Based Usability

With S2K Smart Center you can create a personalized environment that contains any of the applications that you wish to access. In addition, the user can configure their homepage with a wide variety of application specific portlets that best suit the user's role. Portlets come in many different forms and provide access to information from all S2K Enterprise applications. By having immediate access to important information without ever having to leave your homepage, users can be more productive and react to business issues faster.
